

**IN THE CLAIMS:**

Please **AMEND** claims 1-7, 10, and 11, and **CANCEL** claims 12-15 without prejudice or disclaimer in accordance with the following:

1. **(Currently Amended)** An information storage medium for storing multi-angle motion picture data corresponding to a motion picture thereon, comprising:

clip audio-video (AV) streams corresponding to motion picture data for different angles;  
and

clip information corresponding to the clip AV streams wherein each unit of the clip  
information comprises an entry point map comprising information on entry points of a  
corresponding one of the clip AV streams for random access, and information on whether each  
of the entry points is an angle change point through which the motion picture is connectedly and  
successively reproduced from one angle to another angle,

wherein the clip information is provided in a separate area from that of the motion picture  
data.

~~motion picture data for different angles which are interleaved with respect to each other,~~  
~~wherein motion picture data for each angle has a plurality of access points through which motion~~  
~~picture data for another angle is connectedly and successively reproduced; and~~

~~information on the access points provided in a separate area from that of the interleaved~~  
~~motion picture data.~~

2. **(Currently Amended)** The medium according to claim 1, wherein the  
information on whether each of the entry points is an angle change point comprises location  
information of the entry points among the AV stream access points correspond to boundaries of  
interleaved units of the interleaved motion picture data.

3. **(Currently Amended)** The medium according to claim 1, wherein the clip  
AV streams corresponding to motion picture data for different angles are interleaved with respect  
to each other~~further comprising characteristic information corresponding to the motion picture~~  
~~data for different angles, the characteristic information comprising the information on the access~~  
~~points.~~

4. **(Currently Amended)** An information storage~~The medium according to~~  
claim 3, wherein the angle change points correspond to boundaries of interleaved units of the  
interleaved motion picture data.

~~for storing multi-angle motion picture data thereon, comprising:  
motion picture data for different angles which are divided and interleaved with respect to  
each other in interleaved units; and  
information for accessing from an interleaved unit of motion picture data for an angle to a  
next interleaved unit of the motion picture data for the angle and/or for accessing from an  
interleaved unit of motion picture data for an angle to a corresponding next interleaved unit of  
motion picture data for another angle, provided in a separate area from that of the interleaved  
motion picture data.~~

5. **(Currently Amended)** The medium according to claim 1-claim 4, further  
comprising playlist information which comprises at least one playitem that corresponds to the clip  
AV streams further comprising characteristic information corresponding to the motion picture data  
for different angles, the characteristic information comprising the information on the access  
points.

6. **(Currently Amended)** The medium according to claim 3, further  
comprising playlist information which comprises at least one playitem having angle block  
information, wherein the angle block information comprises information on whether the playitem  
is for the motion picture data for different angles~~An information storage medium for storing multi-  
angle motion picture data corresponding to a motion picture, comprising:  
clip audio-video (AV) streams corresponding to motion picture data for different angles,  
which are interleaved with respect to each other; and  
information on jumping points of the clip AV streams provided in a separate area from  
that of the interleaved clip AV streams, wherein the jumping points are access points through  
which the motion picture is reproduced from one angle to another angle.~~

7. **(Currently Amended)** The medium according to claim 6, wherein the  
angle block information further comprises information on a number of different angles for the  
motion picture~~jumping points correspond to boundaries defining units of the interleaved clip AV  
streams.~~

8. **(Cancelled)**

9. **(Cancelled)**

10. (Currently Amended) An apparatus for reproducing motion picture data for different angles corresponding to a motion picture from an information storage medium, the apparatus comprising:

a reading unit which reads clip AV streams corresponding to the motion picture data for different angles, the clip AV streams being interleaved with respect to each other, from the information storage medium; and

a reproduction unit which reproduces the clip AV streams according to clip information corresponding to the clip AV streams provided in a separate area of the information storage medium from that of the interleaved clip AV streams, wherein each unit of clip information comprises an entry point map comprising information on entry points of a corresponding one of the clip AV streams for random access, and information on whether each of the entry points is an angle change point, wherein the angle change point is a point through which the motion picture is reproduced from one angle to another angle. ~~The medium according to claim 6, further comprising playlist information which comprises at least one playitem that corresponds to the clip AV streams.~~

11. (Currently Amended) The apparatus according to claim 10, wherein the information on whether each of the entry points is an angle change point comprises location information of the entry points among the AV stream. ~~medium according to claim 6, further comprising playlist information which comprises at least one playitem having angle-block information, wherein the angle-block information comprises information on whether the playitem is for the motion picture data for different angles.~~

12-16. (Cancelled)
